Canadian Data Report of Fisheries and Aquatic Sciences

Data reports provide a medium for filing and archiving data compilations where little or no analysis is included. Such compilations commonly will have been prepared in support of other journal publications or reports. The subject matter of the series reflects the broad interests and policies of Fisheries and Oceans Canada, namely, fisheries management, technology and development, ocean sciences, and aquatic environments relevant to Canada.

Data reports are not intended for general distribution and the contents must not be referred to in other publications without prior written clearance from the issuing establishment. The correct citation appears above the abstract of each report. Each report is abstracted in the data base *Aquatic Sciences and Fisheries Abstracts*.

Data reports are produced regionally but are numbered nationally. Requests for individual reports will be filled by the issuing establishment listed on the front cover and title page.

Numbers 1-25 in this series were issued as Fisheries and Marine Service Data Records. Numbers 26-160 were issued as Department of Fisheries and Environment, Fisheries and Marine Service Data Reports. The current series name was changed with report number 161.

Rapport statistique canadien des sciences halieutiques et aquatiques

Les rapports statistiques servent de base à la compilation des données de classement et d'archives pour lesquelles il y a peu ou point d'analyse. Cette compilation aura d'ordinaire été préparée pour appuyer d'autres publications ou rapports. Les sujets des rapports statistiques reflètent la vaste gamme des intérêts et politiques de Pêches et Océans Canada, notamment la gestion des pêches, la technologie et le développement, les sciences océaniques et l'environnement aquatique, au Canada.

Les rapports statistiques ne sont pas préparés pour une vaste distribution et leur contenu ne doit pas être mentionné dans une publication sans autorisation écrite préalable de l'établissement auteur. Le titre exact figure au haut du résumé de chaque rapport. Les rapports à l'industrie sont résumés dans la base de données *Résumés des sciences aquatiques et halieutiques*.

Les rapports statistiques sont produits à l'échelon régional, mais numérotés à l'échelon national. Les demandes de rapports seront satisfaites par l'établissement d'origine dont le nom figure sur la couverture et la page du titre.

Les numéros 1 à 25 de cette série ont été publiés à titre de Records statistiques, Service des pêches et de la mer. Les numéros 26-160 ont été publiés à titre de Rapports statistiques du Service des pêches et de la mer, ministère des Pêches et de l'Environnement. Le nom de la série a été modifié à partir du numéro 161.

ABSTRACT

Zetterberg, P.R., Maher, J.M., and Watson, N.M., 2009. Strait of Georgia recreational fishery creel survey finfish data, 2002 to 2006. Can. Data Rep. Fish. Aquat. Sci. 1212: xix + 299 p.

Tidal sport fishery landing site surveys and aerial effort counts are conducted annually through a recreational creel survey program in southern British Columbia. This report presents the estimated recreational creel survey finfish catch and effort statistics from the Strait of Georgia and a portion of Juan de Fuca Strait for the years 2002 to 2006. Catch and effort statistics are displayed for each year in reverse chronological order by 1) month, 2) Pacific Fishery Management Area, and 3) by month and Pacific Fishery Management Area for select species.

RÉSUMÉ

Zetterberg, P.R., Maher, J.M., and Watson, N.M., 2009. Strait of Georgia recreational fishery creel survey finfish data, 2002 to 2006. Can. Data Rep. Fish. Aquat. Sci. 1212: xix + 299 p.

Des campagnes de recensement au débarquement des captures sportives effectuées dans les eaux maritimes du sud de la Colombie-Britannique sont organisées sur base annuelle. Ce rapport présente les statistiques relatives aux captures et à l'effort de pêche enregistrés par le secteur sportif dans la zone comprise entre le détroit de Georgia et une partie du détroit de Juan de Fuca pour la période 2002-2006. Les statistiques sont ventilées par ordre antichronologique d'année, selon : 1) le mois; 2) la zone de gestion halieutique du Pacifique; 3) le mois et la zone halieutique confondus, pour certaines espèces.

INTRODUCTION

The tidal recreational fishery is a year round hook and line fishery in the Strait of Georgia (SG) and Juan de Fuca Strait (JDFS). It is particularly active in SG from late spring to late fall with the JDFS fishery active year round. Over 85% of the effort occurs in the summer months from May to September (Collicutt and Shardlow 1993).

The current design used for the SG tidal recreational sport creel survey was implemented in 1980 by Fisheries and Oceans Canada (DFO) to standardize survey methods. Annual SG recreational surveys provide catch and effort statistics by creel sub-area from angler interviews and aerial surveys. Angler interviews provide information on daily activity patterns while aerial surveys determine the number of boats fishing within a given creel sub-area at the time of a given flight. These data were combined to provide monthly estimates of total boat-based effort, Catch Per Unit Effort (CPUE -- catch per boat trip), and catch and release of salmon, groundfish, and rockfish in the fishery.

The SG tidal recreational creel survey had two yearly components; an area wide survey that runs from April to October and a winter creel survey in the Victoria area from November to March. Variations to the survey schedule occurred over time with reductions in monthly coverage primarily due to budget constraints. Yearly comparison tables contain data from May to September to eliminate schedule associated bias (Tables 6 to 15). These tables contain totals that may differ from those provided in the complete yearly catch and effort estimates (Tables 16 to 257).

This report documents 2002 to 2006 finfish catch and effort data from the SG recreational creel surveys conducted in southern B.C. Summaries include catch information from the SG and a portion of JDFS as described in the study area.

METHODS

STUDY AREA

The creel survey study area comprises over 5,900 km² of water surface area and has in excess of 2,400 km of shoreline. From its southern end at Sherringham Point west of Sooke, the area extends northwest to Campbell River (Figure 1). Over 500 boat launch ramps, marinas and public wharves as well as thousands of private boat launching facilities provide access to the SG (Hardie et al. 2002). For management purposes, DFO has divided the coastal waters of B.C. into a geographic grid of Pacific Fishery Management Areas (PFMA's). The SG creel study area encompasses PFMA's 13 to 19, a part of 20 (PFMA 20-5 or 20SG), 28 and 29 (Figure 2). These PFMA's are broken down even further into creel sub-areas (Figures 3 and 4).

DATA COLLECTION

The SG creel survey was comprised of two independent surveys; angler interviews and aerial surveys. Angler interviews provided data on sport fishing CPUE and daily activity patterns. Aerial surveys provided estimates of the total recreational effort in the study area at the time of the aerial survey. SG aerial surveys were divided into three flight patterns; a northern leg (Figure 5), a southern leg (Figure 6), and a winter leg (Figure 7) which covered the Victoria area during winter months. These data were combined to provide monthly estimates of total effort and total catch of salmon, groundfish, and rockfish in the SG study area. In its simplest form, the estimated total catch was calculated by multiplying estimated total effort by CPUE (Hardie et al. 2002).

Annual creel surveys were divided into two portions; a winter portion (Nov to March) which ran only in the Victoria area, and a summer portion (April to October) which ran throughout the SG study area. There were variations from year to year in the months observers were present (Figure 11). Distribution of sampling effort among areas, region (groups of PFMA's), and months of coverage were either random or stratified to follow fishing effort patterns. Within each month, each chosen site (Figure 8) was allocated a certain number of shifts. These shifts were divided equally among weekend and mid-week days and relevant time periods.

The SG recreational study used an access point (landing site) creel survey. With this method, trained interviewers were stationed at key boat access points and marinas to interview recreational fishers at the end of their completed boat trips. The number of boats returning to a site during an observer's shift, the number of interviews attempted and completed, and fishing conditions for the trip were recorded on a tally or summary sheet (Figure 10). Each individual boating party landing was interviewed when time permitted. Observers recorded the following information on the interview form (Figure 9):

- number of licensed anglers in the boat

- time of landing
- whether they had been recreational fishing and whether it was guided or not guided
- citizenship of anglers
- time of departure and length of trip
- time and duration which fishing lines were in the water
- number of lines in the water for fishing party
- a catch summary of total species kept and released and number of hours spent fishing, type of fishing and primary location of fishing in each creel sub-area
- coded-wire tag information from chinook and coho
- biological sampling information
- number of hours directed at each species
- any loss of catch to seals or sea lions
- shellfish catch summary

Interviewer's recorded demographic information, catch by species by creel sub-area, attempted to bio-sample chinook and coho (scales for age, DNA, adipose mark rate, coded-wire tag head recovery) and retrieved weights and lengths from lingcod, halibut and rockfish when possible. Fin rays were also collected from lingcod to obtain age data.

DFO conducted data collection, preliminary processing, and the estimation of the catch and effort statistics. The interview data and the flight information were organized into a recreational creel database where data were then summarized as laid out in the tables at the end of the text.

ORGANIZATION OF THE REPORT

The tables presented at the end of the text are all displayed in reverse chronological order by year and are estimates with their associated standard error (SE). These estimates were calculated from information collected by the survey program during active months from 2002 to 2006 from PFMA's 13-19, a part of 20 (20D or 20SG), 28 and 29. The tables are organized as follows:

Tables 1 to 5 are the number of interviews conducted by month and PFMA, along with the number overflights conducted for that year.

Tables 6 to 15 are yearly comparisons of fish and effort for 2002 to 2006 using estimate values from May to September inclusively.

Tables 16 to 257 are detailed comparisons of fish estimates grouped by year based on interview coverage by month and by PFMA.

Tables 16 to 95 list finfish catch data presented as kept, then released by month then PFMA and include effort estimates. Yearly salmon catch overall is presented first and followed with a breakdown of chinook (legal and sub-legal) and coho (adipose clipped and unclipped) estimates. This is then followed by groundfish and rockfish catch estimates by month and then PFMA.

Tables 96 to 257 list finfish effort as kept and released by month and PFMA starting with overall effort then working through the salmon by species (chinook, coho, sockeye, pink, chum, and then all salmon respectively). This is followed by halibut, lingcod (legal and sub-legal) and then the rockfish species (Yelloweye, Quillback, Copper, China, Tiger, and other rockfish respectively).

Tables 258 to 287 list the CPUE for each year. Kept and released CPUE is displayed for salmon, lingcod, halibut, rockfish species (Yelloweye, Quillback, Copper, China, Tiger and other rockfish respectively), all salmon all groundfish and then all rockfish by month then by PFMA.

Table 288 lists the taxonomic references of the various species included in the report as individuals or as grouped species.

Table 289 lists the identified or grouped species included in other groundfish and other rockfish.

Figures 1 to 11 are organized after the tables and include maps of the survey area, PFMA's, creel sub-areas, flight paths, landing sites, examples of the data collection forms and a survey coverage matrix by year/area and month for 2002 to 2006 for the SG.

ACKNOWLEDGMENTS

Thanks to Pat Bay Air and Island Air for providing flights in all kinds of weather. Special thanks also to Leroy Hop Wo, Ted Carter, and Kris Hein for their assistance and endless patience on various parts of this report. Thanks to all the creel observers within the study area who collected the data that make this report and catch estimates possible. Most importantly, we would like to thank all the private marina and boat ramp owners for their valuable assistance and co-operation and to the many thousands of anglers who voluntarily participated in the annual surveys.

¹Number of SG Monthly Over Flights represents flight sequences per departure inclusive of sub-regionally separated tandem flights.

Interviews showing in Area 18 outside the normal operating months are results of interviews conducted in Area 19 at Sidney.

Table 6. Tidal effort and kept and released sport salmon catch estimates for the SG, 2002 to 2006.

Year	Effort	Kept					Released				
		Chinook	Coho	Sockeye	Pink	Chum	Chinook	Coho	Sockeye	Pink	Chum

Table 288. Taxonomic Reference of Species Reported.

Atlantic Salmon	<i>Salmo salar</i>
Black Rockfish	<i>Sebastes melanops</i>
Cabezon	<i>Scorpaenichthys marmoratus</i>
Canary Rockfish	<i>Sebastes pinniger</i>
China Rockfish	<i>Sebastes nebulosus</i>
Chinook Salmon	<i>Oncorhynchus tshawytscha</i>
Chum Salmon	<i>Oncorhynchus keta</i>
Coho Salmon	<i>Oncorhynchus kisutch</i>
Copper Rockfish	<i>Sebastes caurinus</i>
Dogfish (Spiny Dogfish)	<i>Squalus acanthias</i>
English Sole	<i>Parophrys vetulus</i>
Flatfishes	<i>Heterosomata, Pleuronectiforme spp.</i>
Flounder	<i>Bothidae, Paralichthyidae, Pleuronectidae spp.</i>
Greenling	<i>Hexagrammos, Oxylebius spp.</i>
Halibut	<i>Hippoglossus stenolepis</i>
Herring (Pacific Herring)	<i>Clupea pallasii</i>
Lingcod	<i>Ophiodon elongatus</i>
Not Identified Salmonids	<i>Salmonidae spp.</i>
Other Rockfish	<i>Sebastes, Sebastolobus spp.</i>
Other sole	<i>Soleidae, Achiridae, Cynoglossidae, Pleuronectidae spp.</i>
Pacific Cod	<i>Gadus macrocephalus</i>
Pacific Sandbar	<i>Citharichthys sordidus</i>
Pacific Tomcod	<i>Microgadus proximus</i>
Perches	<i>Embiotocidae spp.</i>
Pink Salmon	<i>Oncorhynchus gorbuscha</i>
Quillback Rockfish	<i>Sebastes maliger</i>
Ratfish	<i>Chimaeriforme spp.</i>
Red Irish Lord	<i>Hemilepidotus hemilepidotus</i>
Redstripe (Redbanded) Rockfish	<i>Sebastes babcocki</i>
Rock Sole	<i>Lepidopsetta bilineata, Lepidopsetta petraborealis</i>
Sculpins	<i>Cottoidei spp.</i>
Skates	<i>Rajidae spp.</i>
Sockeye Salmon	<i>Oncorhynchus nerka</i>
Starry flounder	<i>Platichthys stellatus</i>
Tiger Rockfish	<i>Sebastes nigrocinctus</i>
Vermillion Rockfish	<i>Sebastes miniatus</i>
Yellow Eye Rockfish	<i>Sebastes rubberimus</i>
Yellow Tail Rockfish	<i>Sebastes flavidus</i>
